

Top-quality fastenings
for demanding applications

STRUCTURAL BOLTING ASSEMBLIES

DESIGNED AND MANUFACTURED IN FRANCE

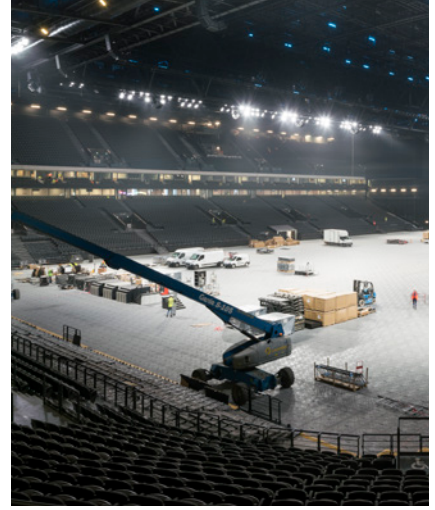

“ *SOFAST Technologie was born from the expertise of its executive managers in steel construction fasteners. Driven by human values and a requirement for absolute perfection, SOFAST Technologie offers a wide range of fastening assemblies to meet the needs of steel construction professionals and many other fastening specialists.* ”

REASONS WHY YOU SHOULD CHOOSE SOFAST TECHNOLOGIE

- ◆ Know-how with a high technological value-added
- ◆ Certified products, made in France
- ◆ Reliable products, approved by the most important professionals in the sector
- ◆ A product range from M12 to M36 without coating or with hot-dip galvanized finish
- ◆ A dedicated product-qualification laboratory
- ◆ A team of highly motivated, committed and pragmatic professionals
- ◆ Technical support services for all your projects

MULTIPURPOSE APPLICATIONS

The SOFAST Technologie product range is considered to be among the most comprehensive on the market, covering all the requirements of professionals using preloaded fastenings for their assemblies. Examples of the main fields of application:

- stadiums, sport and cultural centers,
- major engineering structures, bridges,
- large industrial building projects,
- leisure park attractions,
- pylons, towers and ski lifts,
- extraction facilities for the mining industry,
- energy industries.

THE MANUFACTURER'S KNOW-HOW

The HR bolts made by SOFAST Technologie result from the total control of the manufacturing process:

- forming of the bolt thread by deformation (cold forming, hot forming, rolling),
- “quench and temper” heat treatment guaranteeing superior mechanical performance in compliance with quality classes 8.8 and 10.9,
- surface treatment for products requiring optimum corrosion protection (hot-dip galvanizing), or to ensure control of friction coefficients (lubrication),

SOFAST Technologie operates its own test laboratory equipped with proven facilities for qualifying its entire product range (bolts and fittings): tensile testing, hardness testing, suitability testing for prescribed use, etc.
